SCAS283G - JANUARY 1993 - REVISED JUNE 1998

- *EPIC*<sup>TM</sup> (Enhanced-Performance Implanted CMOS) Submicron Process
- ESD Protection Exceeds 2000 V Per MIL-STD-883, Method 3015; Exceeds 200 V Using Machine Model (C = 200 pF, R = 0)
- Latch-Up Performance Exceeds 250 mA Per JESD 17
- Typical V<sub>OLP</sub> (Output Ground Bounce)
  < 0.8 V at V<sub>CC</sub> = 3.3 V, T<sub>A</sub> = 25°C
- Typical V<sub>OHV</sub> (Output V<sub>OH</sub> Undershoot)
  > 2 V at V<sub>CC</sub> = 3.3 V, T<sub>A</sub> = 25°C
- Inputs Accept Voltages to 5.5 V
- Package Options Include Plastic Small-Outline (D), Shrink Small-Outline (DB), and Thin Shrink Small-Outline (PW) Packages, Ceramic Chip Carriers (FK) and Flat (W) Packages, and DIPs (J)

### description

The SN54LVC08A quadruple 2-input positive-AND gate is designed for 2.7-V to 3.6-V V<sub>CC</sub> operation and the SN74LVC08A quadruple 2-input positive-AND gate is designed for 1.65-V to 3.6-V V<sub>CC</sub> operation.

The 'LVC08A devices perform the Boolean function  $Y = A \bullet B$  or  $Y = \overline{\overline{A} + \overline{B}}$  in positive logic.

NC - No internal connection

Inputs can be driven from either 3.3-V or 5-V devices. This feature allows the use of these devices as translators in a mixed 3.3-V/5-V system environment.

The SN54LVC08A is characterized for operation over the full military temperature range of –55°C to 125°C. The SN74LVC08A is characterized for operation from –40°C to 85°C.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

Copyright © 1998, Texas Instruments Incorporated On products compliant to MIL-PRF-38535, all parameters are tested unless otherwise noted. On all other products, production processing does not necessarily include testing of all parameters.

SCAS283G - JANUARY 1993 - REVISED JUNE 1998

### logic symbol<sup>†</sup>

<sup>†</sup> This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12. Pin numbers shown are for the D, DB, J, PW, and W packages.

### logic diagram, each gate (positive logic)

### absolute maximum ratings over operating free-air temperature range (unless otherwise noted)<sup>‡</sup>

| Supply voltage range, V <sub>CC</sub>                      |             | –0.5 V to 6.5 V                   |
|--|-------------|-----------------------------------|
| Input voltage range, V <sub>I</sub> (see Note 1)           |             | –0.5 V to 6.5 V                   |
| Output voltage range, V <sub>O</sub> (see Notes 1 and 2)   |             | –0.5 V to V <sub>CC</sub> + 0.5 V |
| Input clamp current, I <sub>IK</sub> (V <sub>I</sub> < 0)  |             |                                   |
| Output clamp current, I <sub>OK</sub> (V <sub>O</sub> < 0) |             |                                   |
| Continuous output current, IO                              |             | ±50 mA                            |
| Continuous current through V <sub>CC</sub> or GND          |             | ±100 mA                           |
| Package thermal impedance, $\theta_{JA}$ (see Note 3):     | : D package | 127°C/W                           |
|  | DB package  | 158°C/W                           |
|  | PW package  | 170°C/W                           |
| Storage temperature range, T <sub>stg</sub>                |             | –65°C to 150°C                    |

Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES: 1. The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.
  - 2. The value of  $V_{CC}$  is provided in the recommended operating conditions table.
  - 3. The package thermal impedance is calculated in accordance with JESD 51.

SCAS283G - JANUARY 1993 - REVISED JUNE 1998

- NOTES: A. CL includes probe and jig capacitance.
  - B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
  - C. All input pulses are supplied by generators having the following characteristics: PRR $\leq$ 10 MHz, Z<sub>O</sub> = 50  $\Omega$ , t<sub>f</sub> $\leq$ 2 ns, t<sub>f</sub> $\leq$ 2 ns.
  - D. The outputs are measured one at a time with one transition per measurement.
  - E.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
  - F.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
  - G. t<sub>PLH</sub> and t<sub>PHL</sub> are the same as t<sub>pd</sub>.

#### Figure 1. Load Circuit and Voltage Waveforms

SCAS283G - JANUARY 1993 - REVISED JUNE 1998

- NOTES: A. CL includes probe and jig capacitance.
  - B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
    C. All input pulses are supplied by generators having the following characteristics: PRR≤10 MHz, Z<sub>O</sub> = 50 Ω, t<sub>f</sub>≤2 ns. t<sub>f</sub>≤2 ns.
  - D. The outputs are measured one at a time with one transition per measurement.
  - E.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
  - F. tp7I and tp7H are the same as  $t_{en}$ .
  - G. tpLH and tpHL are the same as  $t_{pd}$ .

### Figure 2. Load Circuit and Voltage Waveforms

SCAS283G - JANUARY 1993 - REVISED JUNE 1998

- NOTES: A. CL includes probe and jig capacitance.
  - B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
  - C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  10 MHz, Z<sub>O</sub> = 50  $\Omega$ , t<sub>r</sub>  $\leq$  2.5 ns, t<sub>f</sub>  $\leq$  2.5 ns.
  - D. The outputs are measured one at a time with one transition per measurement.
  - E. tpl 7 and tpH7 are the same as tdis.
  - F. tpzL and tpzH are the same as ten.
  - G.  $t_{PLH}$  and  $t_{PHL}$  are the same as  $t_{pd}$ .

#### **IMPORTANT NOTICE**

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgement, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

CERTAIN APPLICATIONS USING SEMICONDUCTOR PRODUCTS MAY INVOLVE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS. INCLUSION OF TI PRODUCTS IN SUCH APPLICATIONS IS UNDERSTOOD TO BE FULLY AT THE CUSTOMER'S RISK.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
